

Natural Stone, Beautiful Home

Fixing Thinstone to External Insulation

External Insulation is becoming increasingly popular. Advantages of external insulation include improved thermal comfort and reduced energy consumption.

Now, with the help of Thinstone, you can combine this modern building technology with traditional stonework for an attractive natural finish in your home.

Ribbed galvanised expanded metal is fixed to the wall. This provides a suitable surface for adhesion.

150 x 8mm concrete galvanized bolts are used to fix the expanded metal to the wall. These fixings go right through in to the wall structure. Insert fixings at a slight upwards angle.

Large galvanized washers are used with the fixings. Fixings are also countersunk in to the insulation/mesh. Use approx 15 - 20 fixings per sheet of mesh.

ThinStone is then applied in the normal way using our recommended adhesive.

The finished result - ThinStone Natural Stone cladding fixed on to external insulation.
